🇺🇸 United States

Summary

Product-minded engineering leader with 15 years of experience owning technical direction for customer-facing features from concept through production. Track record of driving architecture decisions, leading cross-functional teams to delivery, and partnering with product on strategy for AI-powered applications, distributed systems, and modern web experiences.

Work Experience

Amperity

September 2023 – July 2026

Senior Software Engineer

Philadelphia, USA

Amperity is an enterprise SaaS customer data platform (CDP) that uses identity resolution to unify customer data and provides downstream tools for audience management, segmentation, and marketing activation.

- Owned technical direction for AI agent and Profile API initiatives, partnering with product on scope and roadmap decisions
- Led a customer-facing AI assistant for account consumption investigation from architecture to production: owned the product and technical design decisions — what to build, how to structure it, where data lives — and used Claude Code to execute against them, directing the team to a 98% session success rate at launch.
- Developed internal AI chatbot for interacting with customer usage and pricing data using Snowflake Cortex Analyst
- Drove architecture decision to redesign Profile API indexing strategy for multi-criteria lookup, and led its migration to Kubernetes deployment

Stitch Inc.

November 2016 – September 2023

Principal Software Engineer

Philadelphia, USA

Stitch is a developer-focused cloud ELT platform that builds and managed data pipelines, continuously replicating data from operational systems into cloud data warehouses such as Snowflake, BigQuery, and Redshift

- **Principal Software Engineer** (August 2022-September 2023)
Led team through full lifecycle of the Pipeline Monitoring feature: owned technical design of a new relational DB model for events, decided on and stood up new Kafka, KafkaSQL DB, and Kafka Connect infrastructure, and directed migration of deployments from AWS OpsWorks to Kubernetes
- **Senior Software Engineer** (May 2021-August 2022)
 - Cost optimization: Reduced data warehouse compute costs by 60% for some customers by investigating and optimizing the types of warehouse requests our product makes
 - Performance improvement: improved customer data loading time from an average of 10 hours for 100 million row benchmark dataset to under 1 hour by implementing parallelization and tuning hardware utilization.
- **Software Engineer** (November 2016-May 2021)
 - Modernize frontend stack: Migrated frontend app from legacy technology (AngularJS + Coffeescript + Grunt + Gulp) to more maintainable and usable tech (ES6 + React/Redux + Webpack)
 - Mentorship: Onboarded and trained engineering team on best practices, eliminating silo'ing of frontend development
 - Quality ownership: Championed and introduced more comprehensive test suites to frontend

Nuix

July 2015-November 2016

Software Engineer

Conshohocken, PA, USA

Nuix is an enterprise software platform for digital forensics, eDiscovery, and investigative analytics

- Led rewrite of large-scale Backbone web application, used to sort, filter, tag and bookmark large sets of unstructured data with mouse and keyboard, as well as develop re-playable workflows, in React + Redux with a 4-person team.

Monetate
Javascript Engineer

September 2013 - June 2015
Conshohocken, PA, USA

- Personally invented and implemented "Custom Endcaps", which dramatically improved the power of our e-commerce personalization tool by pulling dynamic content from individual product category pages, and making API requests to two separate services, so that an individual campaign could target multiple product categories where customers had previously needed to set up one campaign per category.
- Created custom Javascript modules for client marketing campaigns

Technical skills

Leadership: Technical direction-setting, cross-functional team leadership, project leadership, mentorship

Languages and frameworks: Clojure, Elixir, Python, Javascript, React, Redux, AngularJS, Backbone, Phoenix, SQL, Ruby

DevOps + build tools: Kubernetes, Helm, Terraform, Docker, Git, AWS, CircleCI, , Webpack, Gulp, Storybook

AI Tools: Claude, Snowflake Cortex, developing internal AI tools and evaluation framework

Education

Bachelor of Arts, Mathematics and German
Dickinson College, Carlisle, PA
Cumulative GPA: 3.75/4.0

May 2008

Awards

Fulbright Scholarship	for a year as English Teaching Assistant in Germany	2008
Latin Honors	Magna Cum Laude	2008
Wieland Prize	awarded to the senior German major who has demonstrated the most excellent achievements in the field of German overall	2008
Dana Research Fellowship	to assist math professor David Richeson with his book, Euler’s Gem	2006
John Dickinson Scholarship	highest academic scholarship	2004-2008
